Subject: I want labels on genetically engineered milk and other foods.
Sensitivity: Personal

Attn: L. Robert Lake:

I am appalled that there is such widespread concealment of the things that are being done to our foods, and the potential for serious health hazard to result from these practices.

I implore you to urge exert your influence at the next Codex meeting, to persuade the group to take the initiative to regulate the industry, and to require labeling on all foods that have been genetically engineered. I am especially concerned about milk, and other animal products; however, other foods subjected to genetic engineering should be made known to the public, so that consumers may make informed choices, and not be forced to play what may amount to a game of Russian Roulette in the supermarket.

Sincerely,

Susan A. Molenda
